EXPERIENCE

Akij iBOS Ltd. **Nov 2024 – Present**
Engineering Team Lead (Software Engineer L-II) *Dhaka, Bangladesh*

- Architected a multi-tenant OTA booking platform of 8 .NET 9 microservices, taking it from an empty repository to 3 live white-label client deployments serving 742 B2B agency accounts and 1,000+ bookings per month.
- Led a team of 10 across backend, frontend, and supplier integration, establishing the patterns, code review, and pair-programming practices that brought the second client live 6 weeks after the first.
- Designed the flight-search aggregation layer, fanning out over gRPC to 11 supplier and GDS connectors (Sabre, Amadeus, Travelport) and streaming results over Server-Sent Events: 1,000+ live fares aggregated in under 10s, with the first fares on the agent's screen in about 4s.
- Modelled pricing, markup, discount, and ancillary logic as tenant configuration rather than code, putting 96 live rules in operations' hands and removing deployments from commercial changes.
- Built the platform observability layer capturing every incoming and inter-service call to blob storage behind a unified Azure, AWS, and Cloudflare abstraction, now the primary tool for production debugging and on-call triage.
- Owned the architecture of TrackForce, a real-time employee-activity monitoring platform for 500+ employees, designing the flow from on-device agent through ingestion and storage to the reporting dashboard.

REVE Systems Ltd. **Jul 2023 – Oct 2024**
Software Engineer *Dhaka, Bangladesh*

- Built the Legal Case and Utilization Declaration modules for the National Board of Revenue's Customs Bond Management System (Java, Spring Boot, Oracle). Garment exporters had been doing this compliance work by hand.
- Raised throughput 25% by tuning queries and data access. Also wrote the BGMEA and BKMEA compliance sync, secured with OAuth2 and Spring Security.

BJIT Group **Apr 2022 – Jun 2023**
Software Engineer, Backend *Dhaka, Bangladesh*

- Shipped a GraphQL Backend-for-Frontend unifying multiple backend services for Rakuten e-commerce modules, reducing frontend integration complexity across the product teams.
- Cut nested-query latency through resolver batching and schema stitching, and contributed reusable backend service patterns adopted across the team.

SKILLS

Languages	C#, Java, TypeScript, SQL, Python
Backend	ASP.NET Core (.NET 9), Entity Framework Core, Spring Boot, Spring Security, JPA/Hibernate, SignalR, xUnit, JUnit
Systems	Microservices, Distributed Systems, REST, GraphQL, gRPC, Server-Sent Events, Domain-Driven Design, OAuth2/JWT, RBAC
Data	SQL Server, PostgreSQL, MySQL, Oracle, MongoDB, DynamoDB, Redis, Elasticsearch
Frontend	Next.js, React, Ant Design
Infra	Docker, Kubernetes, Azure, AWS, GitHub Actions, App Insights, ELK/Seq

EDUCATION

Daffodil International University, B.Sc. in Computer Science and Engineering, CGPA 3.83/4.00 2018 – 2021
Adam Mickiewicz University, Poznań, Poland, exchange semester 2021

PUBLICATIONS AND AWARDS

10 peer-reviewed publications in applied machine learning, 3 as first author, 185 citations. **IEEE Best Paper Award**, WIECON-ECE 2020. Reviewer for *ISA Transactions* and three further journals.
